

**BIOCOTE®***Antimicrobial Protection*

With an estimated 5.5 million people suffering from food-borne illnesses every year, food safety is an important concern for every home cook. To offer the highest standards of food safety, CDN announces that many of its NSF® Certified thermometers and scales will now be manufactured with BioCote®, a technology that offers antimicrobial protection for the expected lifetime of the product. Widely available at retail locations, these professional quality thermometers give home cooks a new reason to upgrade, creating added sales opportunities.

BioCote® is an antimicrobial agent that contains silver, a known antimicrobial. It is shown to be a safe anti-microbial that helps prevent surface cross-contamination by inhibiting growth in a broad spectrum of microbes such as bacteria, mold and fungi on a product's surface.

While BioCote® offers an extra form of protection against microbes, it must be used in conjunction with good hygiene/cleaning practices. Yet even in the cleanest environments, microbes will begin to multiply on surfaces in between cleaning. To complement cleaning practices, BioCote® reduces the levels of harmful microbes on surfaces by up to 99.9% over a 24-hour period.

BioCote®'s silver-based antimicrobial additive is added to CDN NSF® Certified thermometers at the time of manufacture to provide safe and long lasting product protection, working 24 hours a day for the expected lifetime of the product.

BioCote® technology gives CDN NSF® Certified thermometers and scales constant, built-in antimicrobial protection, providing a protected surface that helps prevent microbial growth. The addition of BioCote® does not affect the performance or appearance of the product in any other way than imparting antimicrobial qualities.

All BioCote® protected products are regularly validated and quality control tested to ISO 22196 where applicable, in an independent laboratory.

BioCote® is the only antimicrobial technology in the world to be HACCP certified. BioCote®'s unique HACCP certification signifies the independent assessment and verification of stringent quality control procedures.

CDN NSF® Certified thermometers and scales featuring BioCote® will include select units from the following lines: digital thermometers, bimetal thermometers, thermocouple thermometers, infrared thermometers, candy & deep fry thermometers, beverage & frothing thermometers and master scales.

These BioCote® protected CDN thermometers and scales act as an additional line of defense and protects the product surface from microbial degradation.

BioCote[®] is the only antimicrobial technology in the world to be HACCP certified. HACCP International is a leading food science organization specializing in the HACCP food safety methodology and its application within food and related industries. HACCP International operates a world-renowned product certification program – certification of food safe equipment, materials and services – confirming a product's suitability for use within food businesses that operate to the world's highest standards.
